

Tomatoes have
about 35 000 genes

Fruitflies have around
13 600 genes

Humans have about
20 000 - genes

Worms have 19 099
genes... that's very
close to the number of
genes humans have!
Remember: Humans
don't look like worms
because the type of
information in worm
genes is different to
that in human genes.

Honey Bees have 10 157
genes

All living things have genes.
